

Know Yourself

through
Dermatoglyphics Multiple Intelligence Test (DMIT)

Every child operates at a genius level up to the age of 4. What happens after that? Shocking Harvard study proves that almost all children are born genius, but only 2% retain their talent into adult hood.

If an individual's key talents are identified, recognized and encouraged there is a 100% chance to unleash all inborn intelligences to full power and lead an extraordinary life!

WHAT IS DMIT ?

Dermatoglyphics (derma-SKIN , glyph-CARVING) is the study of patterns on an individual's fingers.

Dermatoglyphics Multiple Intelligence Test (DMIT) technique has long been developed by scientist Dr. Howard Gardner and medical experts. It is a scientific study associated with fingerprint patterns and brain lobes, which helps in understanding the unique inborn potential and personality. DMIT analysis is based on Neuroscience and Multiple Intelligence Theory.

How will you benefit?

For All

- Identify and harness your core competence.
- Rekindle your passion and revive your dreams.
- Invest wisely in suitable self development programs.
- Improve relationship with self and others.
- Boost self empowerment and well-being.

For Students:

- Makes academic and career choices easier.

For Children:

- Identifies hidden inborn potential early in life.
- Reveals personality, multiple intelligence, preferred learning style etc.
- Boosts self confidence & well being.
- Strengthens the bond between parents and child.
- Create a conducive growth environment and bring out the best in your child.

For Corporate:

- Ensure pre-employment screening.
- Identify core competence of staff.
- Identify training needs.
- Enhance productivity.
- Boost employee morale.
